

## INTRODUCING THE CEM ACTION FUND

The new Clean Energy Ministerial (CEM) Action Fund seeks to channel funding directly into major international efforts that accelerate clean energy action and fight climate change. The CEM harnesses international collaboration to make clean energy transitions faster, cheaper, and better for all. These collaborative efforts can be the difference between achieving our clean energy and climate goals or missing them by decades. The CEM Action Fund provides an easy and efficient way for a wide range of clean energy actors to directly support public-private collaborations to accelerate clean energy action. In this decisive decade, it is essential that we rapidly accelerate the pace of clean energy deployment and delivery.

## FOR THE WHOLE CEM COMMUNITY

The Action Fund is focused on supporting global public-private collaboration and can receive funding from a wide variety of actors.

### Contributions can be received from:

- Philanthropic organisations
- Business and industry
- Non-governmental organisations
- Governments and the public sector

### Contributions can support:

- The CEM as a whole or specific sectors
- Specific regions or countries
- Targeted activities, events or outputs
- Annual or multi-year projects

## WITH MULTIPLE BENEFITS

- **Accelerate the deployment of clean energy solutions** to help fight climate change, improve energy security and ensure access to affordable and reliable clean energy for all.
- **Support a proven form of flexible, international collaboration** where the world's most powerful clean energy actors choose to work together collaboratively.
- **Help achieve net-zero goals by facilitating the scale-up of existing initiatives** so that they can move towards the massive-scale clean energy deployment required in this decisive decade for climate action.
- Help clean energy communities move beyond rhetoric and **turn clean energy ambition into action.**

## A FEW EXAMPLES...

**Clean Transport** – support an impactful electric vehicle coalition that accounts for 85% of EVs in the world today.

**Clean Fuels** – support the work of a clean hydrogen coalition that is well established and bigger in scale than the G20.

**Clean Industry** – support the adoption of common approaches and the use of public procurement to accelerate the deployment of clean solutions in heavy industry.

**Empowering People** – support coalitions developing the workforce of tomorrow and putting equality at the centre of our clean energy future.
